High Catch Private Limited, Remote – Nov 2023 to Jun 2024

- Improved proficiency in Python, SQL, Data Analysis, TensorFlow, and Keras, reducing code errors by 20%.
- Crafted interactive visualizations using Tableau boosted stakeholder understanding by 50%.
- Refined project management with Git and communication strategies, increasing delivery speed by 20%.
- Coordinated with the team to achieve 80% of the project goals, enhancing operational efficiency.
- Designed a data-driven strategy that elevated team productivity by 15%.

Chadalawada Ramanamma Engineering College, Tirupati – Jul 2020 to May 2023
GPA – 8.14

- Acquired advanced skills in python, R, and SQL via coursework and hands-on projects, significantly boosting the efficiency and success of various initiations.
- Directed team efforts in creating and executing analytical solutions, achieving a notable enhancement in project results and overall performance.
- Achieved certification from the department for a paper presentation on the topic of cloud computing.

- Developed a sophisticated deep learning model for sentiment analysis on Twitter, which achieved an impressive 90% accuracy in classifying tweet sentiment.
- Conducted extensive research and implemented advanced techniques, boosting model accuracy by 15%.
- Executed comprehensive data preprocessing, including tokenization, normalization, and stop word removal, enhancing model performance by 15%.
- Applied rigorous data cleaning and preparation practices following industry standards, increasing data quality by 30%.
- Evaluated the model using rigorous cross-validation techniques, leading to a 10% reduction in error rates through careful hyperparameter tuning. This iterative process involved multiple rounds of testing and optimization.

- Drafted a deep learning model achieving 96% accuracy in COVID-19 detection using X-ray images.
- Collected and pre-processed extensive data, ensuring the quality and relevance of the training dataset and reducing preprocessing time by 40%.
- Trained a neural network using convolutional neural networks (CNN) and transfer learning techniques.
- Evaluated performance through rigorous testing and validation, achieving a 20% increase in sensitivity and specificity.

- Data Analysis, Data Cleaning, Data Visualization, Deep Learning, Natural Language Processing (NLP), TensorFlow
- Python, SQL, PostgreSQL, Machine Learning, Scikit-learn, Web Scraping, Jupyter Notebook, Google Colab
- Statistical Analysis, Google Analytics, MS Excel, Tableau, Power BI, Matplotlib, Pandas, NumPy, Seaborn

- Leveraged data analysis techniques to derive actionable insights from complex datasets in multiple projects.
- Solved complex problems by breaking them down into manageable tasks and developing strategies.

- Star Agile – Nov 2023 to Jun 2024
- IBM (Cognitive Class.ai) – Aug 2023 to Oct 2023
- IBM (Cognitive Class.ai) – Jul 2023 to Sep 2023
